

CohortGen: Promoting Collaboration Through
Automatic Cohort Generation
Billy Barnett MA
Charisse Madlock-Brown PhD

Have an EHR warehouse...what next?

- What is a Data Warehouse?
 - An integrated, granular, historical single point of reference for data
 - Data warehousing in healthcare
 - Millions of patient records collected
 - Billions of data points
 - Extracting data is challenging
 - Requires special skill
 - Many researchers are unclear on what is available

Promoting Research And Collaboration

- Need for cohort generation
 - Challenges associated with promoting collaboration through profiling systems
 - Difficulty identifying meaningful subsets from Big Data EHR data warehouses

Primary Data Source

- Health Facts Data Warehouse
 - Started in 2001 by Cerner
 - Over 70 million patient records
 - Types of data
 - Demographics
 - Diagnoses
 - Prescriptions
 - Procedures
 - Laboratory tests
 - Clinic locations
 - Billing
 - Hospitals

Elsevier Developer API

- REST API to retrieve research article metadata:
 - Title
 - Authors and affiliations
 - Abstract
 - Keywords
- With a developer key, we were able to get all UTHSC articles

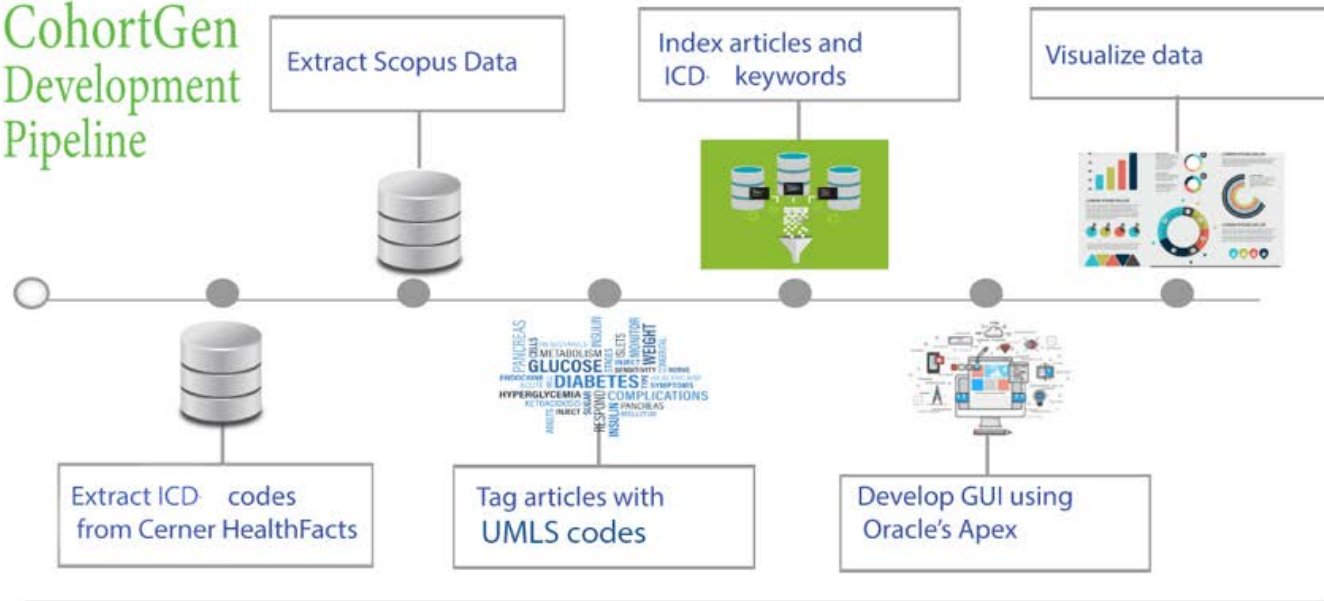

cTakes

- Clinical Text Analysis and Knowledge Extraction System (cTAKES)
- Apache NLP system for extracting information from EMR
- Can be used to tag documents with UMLS concepts

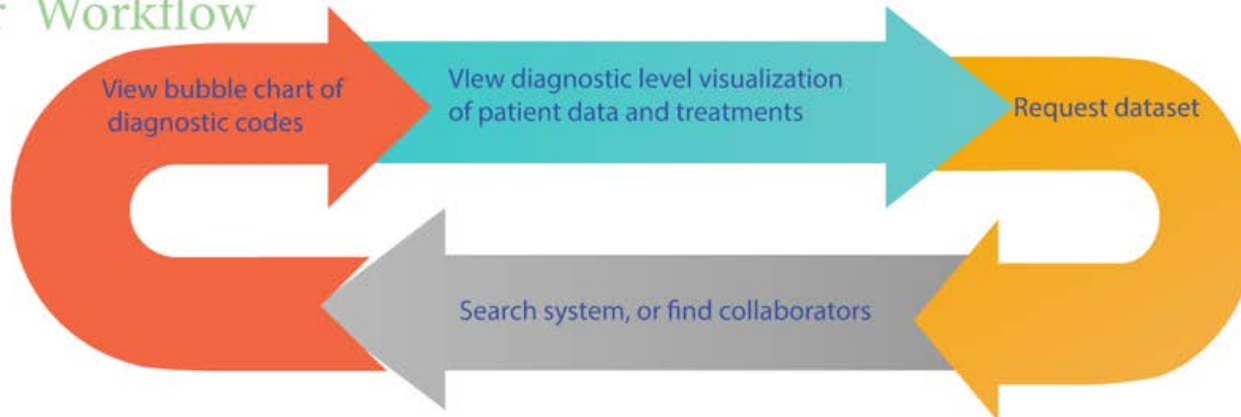

Other Data Sources

- Unified Medical Language System (UMLS)
 - Produced by the National Library of Medicine
 - Metathesaurus database
 - Useful for informatics research
- Faculty extract from human resources

CohortGen Development Pipeline

User Workflow

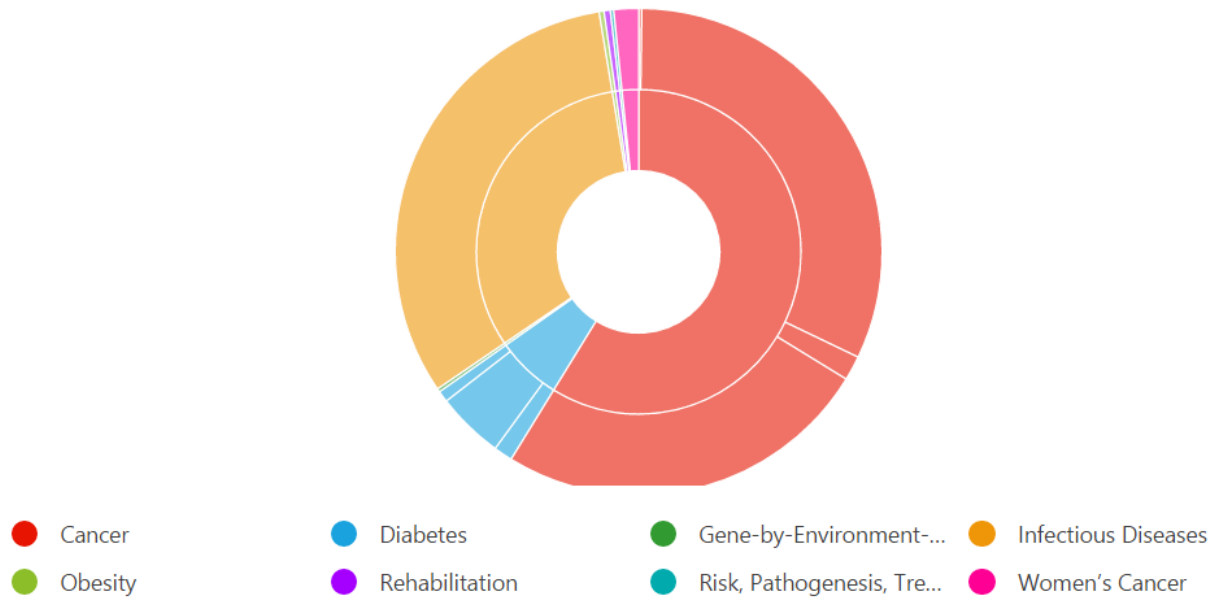

Finding researchers

Researcher Profile

- Sunburst chart summary of research areas

HEALTH Facts information for Area

- Gender breakdown summary

Health Facts information for Area

- Age group summary

Health Facts information for Area

- Race breakdown summary

Small User Review

- Group of three researchers found our system helpful
- Need for search option
 - We have created solr indexes for scholarly articles and diagnostic codes.
- Want to view articles in system
- Not interested in drill-down view
- Want collaborator suggestions when reaching Health Facts page
- Need emphasis on current research

CohortGen Fundamentals

- Generating personalized cohorts based on automatically identified faculty interest
- Data visualization of aggregated data gives users simple view of cohorts
- Research data can be linked to team opportunities
